

COMPSCI 472/572: Object-Oriented Design Patterns

Instructor

Instructor: Jim Buffenbarger
Electronic mail: buff@cs.BoiseState.edu
Office: MEC-302C 426-3567

Meetings

Lectures: TuTh 1:40-2:55 MEC-114
Office hours: TuTh 9:40-10:30 MEC-302C
by appointment MEC-302C

Catalog Description

Designing a flexible and reusable object-oriented software system is difficult. Object-oriented design patterns capture simple, elegant, and recurring solutions to specific object-oriented design problems. This class reviews object-oriented design principles, explains the goals and form of design patterns, and examines several well-known patterns.

Objectives

At the end of this class, a student should be able to demonstrate understanding of the following concepts:

- the meaning and benefits of software reusability
- the form of a software design pattern
- domain-independent versus domain-specific patterns
- how to apply a pattern
- relationships between patterns
- a taxonomy of several well-known object-oriented design patterns
- class patterns versus object patterns

- programming to an interface
- class versus interface inheritance
- inheritance versus composition
- delegation
- inheritance versus parameterized types
- run-time versus compile-time structures
- object-oriented design and programming in C++ and Java

Prerequisites

COMPSCI 125 Introduction to Computer Science I
COMPSCI 225 Introduction to Computer Science II
COMPSCI 342 Data Structures and Algorithms

Textbooks and Other Resources

The textbook is:

- *Design Patterns*, by Erich Gamma, Richard Helm, Ralph Johnson, and John Vlissides. Addison-Wesley, 1995. ISBN 0-201-63361-2.

Activities

Grades are based on student performance of several kinds of activities. Their weights are listed below.

Homework	40%
Exam	25%
Final	35%

Homework

Six homework programs are assigned during the semester. Homework requires students to progressively develop the textbook's graphical editor, Lexi, in Java. Assignments will be made available online.

Exams

An exam and a final are administered during the semester. They are in-class, open-note, and open-book tests. Computers are prohibited.

Grading

Homework is delivered at the beginning of class on the day it is due. Late work is not accepted.

Makeup examinations are not normally administered.

Scores are posted near my office, as they become available. You are encouraged to check your scores to ensure they are recorded properly. If you feel that a grading mistake has been made, contact me within two weeks of the date that work is returned. Old scores are not changed.

Academic Honesty

The following quotation is from the BSU Undergraduate Catalog. You should read that section.

The university's goal is to foster an intellectual atmosphere that produces educated, literate people. Because cheating and plagiarism are at odds with that goal, they shall not be tolerated in any form. Therefore, all work submitted by a student must represent that student's own ideas and effort; when the work does not, the student has engaged in academic dishonesty.

There is related material in the BSU Student Handbook.

The course instructor is responsible for handling each case of academic dishonesty in the classroom except where a major or repeated offense is involved. In a proven case of cheating a student will be dismissed from the class and a failing grade issued.

There are many forms of academic dishonesty. Some relevant examples include:

- Submitting programs, or parts of programs, written by someone else.
- Viewing exam answers, homework answers, or programs written by someone else. This includes material from other courses and previous semesters.
- Distributing exam answers, homework answers, or programs to someone else, even after it has been graded.

The BSU Undergraduate Catalog contains more examples. If you are unsure about a particular case, ask your instructor,

On homework, a student must work independently. Ideas and general principles can be discussed with other students, but work must be original.

Keep your source code to yourself. See the UNIX commands `chmod go-rwx` and `ls -l`.

On exams, of course, each student must work entirely independently.

Computer Accounts

Each student receives an account on the department's network of computers, which run the LINUX operating system. If you are unfamiliar with the department's computers, you are urged to attend office hours during the first week or two of classes. I'll try to get you started with these powerful tools.

You are responsible for understanding and complying with the departmental computing policy.

Schedule

<i>Week</i>	<i>Date</i>	<i>Topic</i>	<i>Assigned</i>	<i>Due</i>	<i>Reading</i>
1	Aug 24 Tue				
	Aug 26 Thu				1
2	Aug 31 Tue				
	Sep 02 Thu		HW#1		2
3	Sep 07 Tue				
	Sep 09 Thu				
4	Sep 14 Tue				
	Sep 16 Thu				
5	Sep 21 Tue				
	Sep 23 Thu				
6	Sep 28 Tue		HW#2	HW#1
